Trustless Talent: The Future of Freelancing

FREELANDSER

The Broken System

- **Lack of Trust:** In traditional freelance systems, employers and employees must rely on mutual trust. There is no guarantee that payment will be made or that the work will be delivered on time.
- **Complex Disputes:** In situations where the employer is not satisfied with the work or the employee doesn't receive payment, dispute resolution can be a costly and time-consuming process.
- **Limited Transparency:** There is a lack of transparency regarding how transactions are conducted, when payments will be made, and how disputes will be resolved.

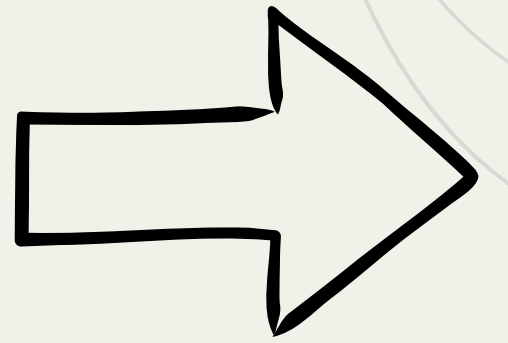

Our Mission

By establishing a trustless, transparent, and decentralized infrastructure, we aim to create a lasting value bridge between employers and developers. Our goal is to create a fair and efficient ecosystem, free from the constraints of traditional intermediary systems, where the rights of both parties are secured through smart contracts. This allows talented developers to access the opportunities they deserve in the global marketplace, while employers can confidently find the right talent.

FREELANDSER

The Decentralized Workflow

FREELANDSER

- **Smart Contracts:** Automated agreements secure payments and project milestones.
- **EigenLayer:** Middlemen create vote pools to vote how reliable they are using restaking protocol
- **Chainlink:** Using chainlink automation and functions, we are minimilasing the need for a centralized backend.
